Preparing for your visit

Pest control for businesses

Preparation checklist

- [ ] Assign a contact person for access and communication.
- [ ] Tell us about food, production and operating hours.
- [ ] Follow the instructions agreed before treatment for protecting products and equipment.

After treatment

The plan adapts to findings and changes in the business. Treatment records are not a substitute for independent certification or compliance assessments.

Preparation and safe re-entry depend on the method and products used. Confirm the specific instructions with PiKa before treatment, especially for children and pets.
