PIKA
PEST CONTROL

Preparing for your visit

Pest management for hotels and accommodation

Preparation checklist

- [ ] Provide access to the areas that need inspection.
- [ ] Tell us about occupancy, working hours and sensitive areas.
- [ ] If bed bugs are suspected, avoid moving belongings to other rooms until you receive specific instructions.

After treatment

Monitoring and early reporting by staff help manage pest activity. Visit frequency is agreed according to the needs of the property.

Preparation and safe re-entry depend on the method and products used. Confirm the specific instructions with PiKa before treatment, especially for children and pets.
