Preparing for your visit

Insect control in Rhodes and the Dodecanese

Preparation checklist

- [ ] Tell us about children, pets and specific property requirements.
- [ ] Keep inspection areas accessible.
- [ ] Follow the specific instructions agreed before the visit; preparation varies by situation.

After treatment

Repeat visits depend on the insect, the extent of the problem and the assessment after treatment. There is no single result or timetable that applies to every property.

Preparation and safe re-entry depend on the method and products used. Confirm the specific instructions with PiKa before treatment, especially for children and pets.
