PIKA
PEST CONTROL

Preparing for your visit

Rodent control in Rhodes and the Dodecanese

Preparation checklist

- [ ] Do not move existing monitoring stations without discussing it first.
- [ ] Tell us about children, animals and staff access.
- [ ] Provide access to inspection areas and explain recent changes to the property.

After treatment

Follow-up helps assess activity and adjust the plan. Restricting entry and managing food and waste are important parts of prevention.

Preparation and safe re-entry depend on the method and products used. Confirm the specific instructions with PiKa before treatment, especially for children and pets.
